

Purity III

The perfect starting point for all Joomla lovers

System Requirement

Your systems need to meet the following requirements before proceeding the installation (Joomla 3 System Requirement)

Server Requirement

- ✓ Software: PHP (Magic Quotes GPC off): 5.31 + (5.4+ recommended)

Database

- ✓ MySQL(InnoDB support required): 5.1+
- ✓ MSSQL 10.5016001+
- ✓ PostgreSQL 8.3.18+

Web Server

- ✓ Apache 2.x+
- ✓ Microsoft IIS 7
- ✓ Nginx 1.0 (1.1 recommended)

Browser Requirement

- ✓ Firefox 4+
- ✓ IE (Internet Explorer) 8+
- ✓ Google Chrome 10+
- ✓ Opera 10+
- ✓ Safari 5+

Development Environment

During development process, Localhost is preferred. You can use the following servers on your PC to develop your site.

Windows

- ✓ WAMPSEVER
- ✓ XAMPP for Windows

Linux

- ✓ LAMP Bundl
- ✓ XAMPP for Linux

Mac OS

- ✓ MAMP & MAMP Pro
- ✓ XAMPP for Mac OS

Download Purity III

Important:

- Purity III is built on T3 Framework so it requires T3 Framework to be installed and enabled in your system.
- Purity III supports Joomla 3. We highly recommend you use the stable version of Joomla 3.

Download Packages

File	Type	Date	Version
Purity III (29.58 kB)	quickstart	01-25-2014	Quickstart Package
Purity III Template (705.5 kB)	template	01-25-2014	Purity III template

Download now (<http://www.joomlart.com/forums/downloads.php?do=cat&id=519>)

The download package includes:

- Quickstart package >> for quickstart installation
- Purity III template >> for manual installation.
- T3 Framework >> for manual installation.

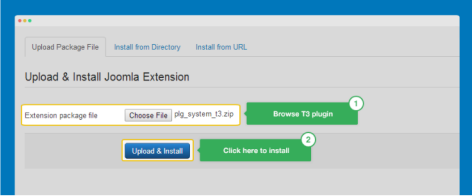

Apart from the Download area on our forum, you can also go to Github to download either our latest works or released packages. However, we highly recommend you download the released version as it is already tested and checked.

Github (https://github.com/t3framework/purity_iii)

Manual Installation

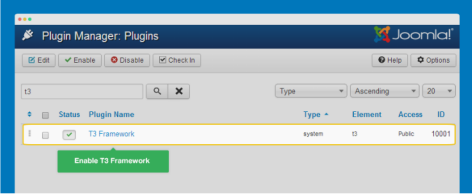

Install T3 Framework

Step 1: Install T3 Framework

Step 2: Enable T3 Framework

When you install T3 Framework, it's auto enabled by default. You can check this by going to: *Extensions >> Plugin Manager* then find T3 Plugin.

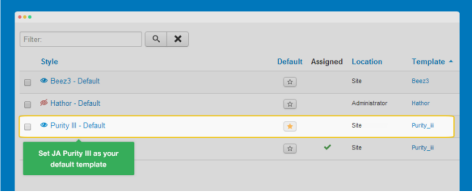

Install Purity III template

Step 1: Install Purity III template

Step 2: Set Purity III template as your default template

To set Purity III template as your default template, go to: *Extensions >> Template Manager >>* set Purity III template as your default template.

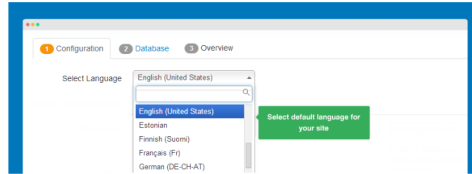

Quickstart Installation

Why using Quickstart:

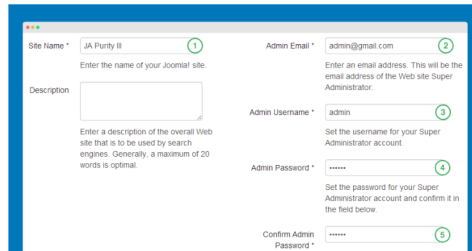

The Quickstart package includes sample data and extensions. Once you install the Quickstart, your site will look the same as Purity III Demo (http://joomla-templates.joomlart.com/purity_iii/)

Step 1: Select default Language

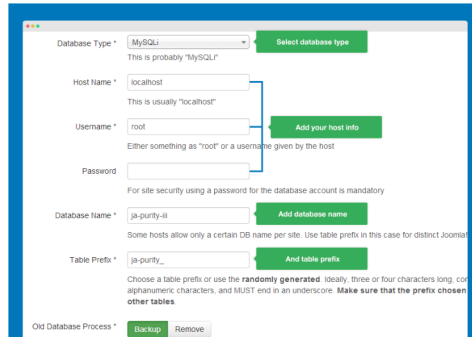

Step 2: Main Configuration

Enter the required information of your site: sitename, email, admin account...

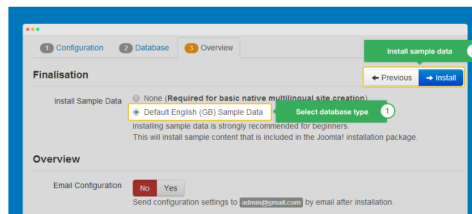

Step 3: Database Configuration

Enter the required information of your site: host name, username...

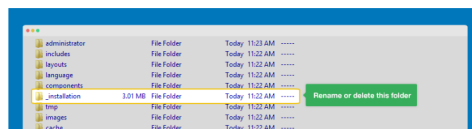

Step 4: Install Sample Data

If you install sample data, you will have a site like our demo. If you select default sample data, you will have a fresh site with T3 framework plugin and T3 blank template installed and enabled.

Step 5: Remove or Rename the "installation" folder

The final step is removing or renaming the installation folder

Upgrading Instruction

Before Upgrading

Please always make a back-up before proceeding to any of the upgrade process. In case there are any problem, you can always restore from the back-up files.

Upgrading Purity III Template and T3 Framework

Which upgrading method to use?

There are 2 ways of upgrading to new version: using Joomla Update (install directly) or using JA Extension Manager. The best method is using JA Extension Manager which will make sure your customization is not lost.

To upgrade template through JAEM (JA Extension Manager Component) you need to install the component and configure it properly. Please check **DETAIL GUIDE** (http://wiki.joomlart.com/wiki/JA_Extensions_Manager/How-to-foj) how to use the extension.

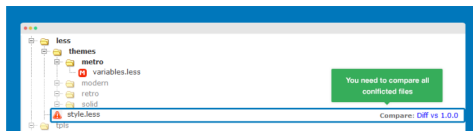

Next, check the new version of template to upgrade

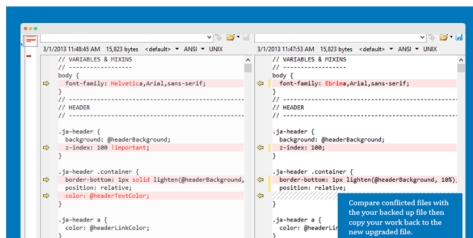

When upgrading, we only pay attention to **conflicted files** - files that have been modified by both user and developer.

When upgrading, the conflicted files will be overridden by files in new version, that means what you customized in the files will be lost.

Now, upgrade template to new version. After upgrading successfully, you need to compare the conflicted files (using your back-up files) then copy what you customize to the new upgraded files.

Folder Structure

This section is to help you understand the structure of Purity III template, the function of folders and files and where you should start.

Purity III template

Purity III template is built on T3 Framework so its folder structure is almost the same with any other JA Templates that are developed with T3 Framework such as: JA Obelisk, JA Muzic, JA Appolio ... and JA T3 Blank template.

```

templates/purity_iii/

```

T3 Framework

You can find the folder structure of T3 Framework at: <http://t3-framework.org/documentation/installation#folder-structure> (<http://t3-framework.org/documentation/installation#folder-structure>).

Recommendation

Any change or customization in the T3 Framework is not recommended. To customize your template, please use Purity III folder.
